In this GeoGebra book you can play and solve different logical problems, all based on the idea of "turning off" all the squares of a totally or partially illuminated board. The game became popular when it was marketed under the name of Lights Out. The difficulty is that when you click on any square, in addition to its state, it changes the state of its adjacent squares.

Lights Out (Games with solutions) - GeoGebra

In reality when making a square you have to cut the boards at 45 degree angles in order to make a square house or frame. If the ink doesn't overlap then you don't have a square picture to see. As in the match sticks, that is not a good analogy because of shape differences. A square is a square, play fair.

Four How many squares are there - PuzzlersWorld.com

There are 6 pieces to this puzzle. For clarity, the piece that has a partial notch in the middle with a square protruding underneath the notch will be #1. The piece with 1 short, rectangular notch and L-shaped sides will be #2. The piece that has 1 square notch and 1 small rectangular notch will be #3.
