When an exponential equation cannot be rewritten with a common base, solve by taking the logarithm of each side. See Example  $\{\{5\}\}$ . We can solve exponential equations with base  $(e)$ , by applying the natural logarithm of both sides because exponential and logarithmic functions are inverses of each other.

5 INVERSE FUNCTIONS EXPONENTIAL, LOGARITHMIC, AND INVERSE TRIGONOMETRIC FUNCTIONS The common theme that links the functions of this chapter is that they occur as pairs of inverse functions. In particular, two of the most important functions that occur in mathematics and its applications are the exponential function  $f(x) = a^x$  and its inverse function, the logarithmic function  $g(x) = \log_a x$ .
