Objective: To determine the value of π from the ratio of the circumference to the diameter of a circle. (Actually, the real point of this lab is to introduce you to the concept of uncertainty in measurements.) Theory: It has been known since ancient times that the ratio

How good the calculations are depends on a number of factors: 1) how careful you are in taking the measurements (laboratory techniques); 2) how good your measuring device is in getting a true measure (accuracy); 3) how reproducible is the measurement
