Planets - NAAP

The NAAP Extrasolar Planets Lab introduces the search for planets outside of our solar system using the Doppler and transit methods. It includes simulations of the observed radial velocities of singular planetary systems and introduces the concept of noise and detection.

Extrasolar Planets - NAAP

simply states that $R^3 = T^2$, where R is a planet's distance from the sun in Astronomical Units (AU) and T is the planet's orbital period in years. Because the distance between Earth and the sun (1 AU) is 149,600,000 km and one Earth year is 365 days, the distance and orbital period of other planets can be calculated when only one variable is ...

planet's parent star.

Extrasolar Planets (LAB) Flashcards | Quizlet

Astronomers have devised some ingenious indirect methods to detect distant planets, known as “extrasolar planets,” or “exoplanets.” Even if the planet cannot be seen directly, we can see its effect on the star. Using this technique (and a few other methods) astronomers have now discovered over 500 extrasolar planets (and counting)!

Extrasolar Planets | Answers in Genesis

Many of the extrasolar planets known today have been detected using the Doppler (or radial velocity) method, but this method's sensitivity depends on the type of planet being observed. Rank the following hypothetical planets from the strongest to weakest Doppler effect they would have on the light from a certain star.

Solved: Many Of The Extrasolar Planets Known Today Have Be ...

the planet, “ v ” is the velocity of the planet’s orbit, and “ r ” is the distance between the planet and the star. Planets close to their stars, like Mercury in our solar system, orbit very quickly. Planets farther away take longer to complete a full orbit. TEACHER TIP DoWnloAD FiELD TriP GiDEs!

an Educator’s Guide

It is difficult to even see individual stars in other galaxies let alone trying to determine a wobble in its motion (the main technique to find extrasolar worlds). So for the timebeing we will have to make do with the billions of worlds in this galaxy that are currently undiscovered.

NAAP ExtraSolar Planets Lab Help? | Yahoo Answers

Extrasolar planets (also known as exoplanets) are defined as planets orbiting stars outside our solar system.
