Geoarchaeology is a multi-disciplinary approach which uses the techniques and subject matter of geography, geology, geophysics and other Earth sciences to examine topics which inform archaeological knowledge and thought. Geoarchaeologists study the natural physical processes that affect archaeological sites such as geomorphology, the formation of sites through geological processes and the effects on buried sites and artifacts post-deposition. Geoarchaeologists' work frequently involves studying

Geoarchaeology - Wikipedia

Archaeological sites are the remains of human behaviors, stone tools, house foundations, and garbage piles, left behind after the occupants leave. However, each site was created in a specific environment; lakeshore, mountainside, cave, grassy plain. Each site was used and modified by the occupants.

The Site Formation Processes in Archaeology

Geoarchaeology uses methods and theories developed in the earth sciences to address archaeological questions related to human settlement, artifacts, site taphonomy, paleoenvironments, and more. The geoarchaeology research approach is truly multidisciplinary, and can be a subfield of geology, earth sciences, or anthropology.
