The Norden Mk. XV, known as the Norden M series in U.S. Army service, is a bombsight that was used by the United States Army Air Forces and the United States Navy during World War II, and the United States Air Force in the Korean and the Vietnam Wars. It was an early tachometric design that directly measured the aircraft's ground speed and direction, which older bombsights could only estimate with lengthy manual procedures. The Norden further improved on older designs by using an analog computer

### Norden bombsight - Wikipedia

A bombsight is a device used by military aircraft to drop bombs accurately. Bombsights, a feature of combat aircraft since World War I, were first found on purpose-designed bomber aircraft and then moved to fighter-bombers and modern tactical aircraft as those aircraft took up the brunt of the bombing role.. A bombsight has to estimate the path the bomb will take after release from the aircraft.

Here's one of the most important and rare Norden bombsight accessory. These are the bombing tables that provides the disk speed and trail settings for each type of bomb. You simply cannot use a Norden bombsight without these (unless you have a Automatic Bombing Computer, which I believe made these mostly obsolete).

This is a bombardier's kit as used in conjunction with the Norden Bombsight on the B-17, B-24, B-29, and other bombers. I put this together based on the description in the Bombardier's Information File manual. I used this for display with the bombsight to demonstrate how the bombardier setup the bomb run.
