The American Parkinson Disease Association (APDA) is the largest grassroots network dedicated to fighting Parkinson's disease (PD) and works tirelessly to help the approximately one million with PD in the United States live life to the fullest in the face of this chronic, neurological disorder.

The Future of Parkinson's Disease Treatments | APDA

Parkinson's disease develops when neurons in the brain and elsewhere in the nervous system fail to function normally or die. The hallmark symptoms of PD — bradykinesia, tremor, postural instability, and rigidity — result primarily from the death of neurons in the substantia nigra, a region in the midbrain critical for motor control.

Advanced and Future Treatments for Parkinson's

Rehabilitation is considered as an adjuvant to pharmacological and surgical treatments for Parkinson's disease (PD) to maximize functional ability and minimize secondary complications. Originally, approaches were based on empirical experience, but growing evidence suggests that exercise-dependent plasticity constitutes the main mechanism underlying the effects of physiotherapy.
