### Bonnie Gold & Roger A. Simons (eds.), Proof and Other ...

A mathematical proof is an inferential argument for a mathematical statement, showing that the stated assumptions logically guarantee the conclusion.The argument may use other previously established statements, such as theorems; but every proof can, in principle, be constructed using only certain basic or original assumptions known as axioms, along with the accepted rules of inference.

### Mathematical proof - Wikipedia

Other Methods of Proof. The methods of proof that were just described are three of the most common types of proof. However, we have seen other methods of proof and these are described below. Proofs that Use a Logical Equivalency. As was indicated in Section 3.2, we can sometimes use of a logical equivalency to help prove a statement.

### 3.6: Review of Proof Methods - Mathematics LibreTexts

\The search for a mathematical proof is the search for a knowledge which is more absolute than the knowledge accu-mulated by any other discipline." Simon Singh A proof is a sequence of logical statements, one implying another, which gives an explanation of why a given statement is true.
