Oracle Database Advanced Queuing Client/Server Communication. Client/Server applications usually run in a synchronous manner. Figure 1-2 demonstrates the asynchronous alternative using Oracle Database Advanced Queuing. In this example Application B (a server) provides service to Application A (a client) using a request/response queue.

Introduction to Oracle Database Advanced Queuing

Oracle SQL queries are not limited to selecting data from a single table. Several tables can be accessed within a query and the data aggregated into a single result set which is returned to the user. The relationship between two tables is known as a join and consists of a mapping of values between specified columns in each table.

Tutorial: Advanced Oracle SQL Queries | Webucator

However, in a real-life example, the foreign table could have arbitrarily many columns and rows. Java DB tells the ForeignTable to limit itself to a small rectangular subset and ForeignTable passes those instructions on to the remote Oracle or MySQL database. The query runs fast because the foreign database selects and sends a small block of data.
