diseased cells in the body. High frequency therapy or “Electromedicine” in alternative medicine is very gentle. In fact, the High Frequency Generator (RF) with Plasma Amplifier is amazingly gentle, you barely know it is turned on. This technology was developed in the 1930s and has been used for alternative therapies with great success.

A second object of the invention is to provide a resonant frequency therapy device which may be constructed from inexpensive readily available materials. A third object of the invention is to provide a resonant frequency therapy device which combines diverse wave energies and generates a composite energy wave which may be used to treat malignant cells.

HEALY RESONANCE - Healy Frequency Therapy

Resonant frequency of any given system is the frequency at which the maximum-amplitude oscillation occurs. All buildings have a natural period, or resonance, which is the number of seconds it takes for the building to naturally vibrate back and forth.

Structural Engineering-Resonance and Structures

How resonant frequency works for removing the cancer is based on the same principle that says that a piece of glass will shatter when it is exposed to a noise that is the right "pitch." To actually break the glass, the vibration (coming from a person's voice or another source) would have to match the vibration of the glass.

Bioresonance Therapy is a non-invasive therapy which involves placing the headphones over the ears for analysis and frequency balancing. The electrodes are connected to a Bio Resonance Machine which measures the energy wavelengths coming from your body, and then counteracts bad frequencies by restoring the optimum balance.

Bioresonance Machines and Bioresonance Therapy

Resonant frequencies operate according to principles that are similar to other treatment modalities such as the Rife Machine. Resonant frequency treatments seek to find vibrational frequencies that resonate with the patients cancer and exploit these to destroy the cancer cell. A variety of treatment centers offer resonant frequencies therapies across the world.

Acoustic resonance is a phenomenon in which an acoustic system amplifies sound waves whose frequency matches one of its own natural frequencies of vibration (its resonance frequencies).. The term "acoustic resonance" is sometimes used to narrow mechanical resonance to the frequency range of human hearing, but since acoustics is defined in general terms concerning vibrational waves in matter ...
