Review of Cardiac Anesthesia With 2100 Mcqs: Kapoor ...

Cardiac anesthesia has fundamentally shifted from a high-dose narcotic technique to a balanced approach using moderate-dose narcotics, shorter-acting muscle relaxants, and volatile anesthetics.. This new paradigm has also led to renewed interest in perioperative pain management involving multimodal techniques that facilitate rapid tracheal extubation such as regional blocks, intrathecal ...

Cardiovascular anaesthesia, having a distinct and unique body of knowledge within anesthesiology, will lead ways to explore opportunities for clinical integration with partners in medicine and surgery.

Masterclass in Cardiac Anaesthesia and Critical Care

This review compared fast-track (low-dose opioids) and traditional (high-dose opioids) anaesthesia for patients undergoing coronary artery bypass grafting (CABG) or valve surgery. The authors found no evidence that fast-track regimens were associated with increased mortality or morbidity. Most of the participants were undergoing elective CABG and the results are likely to be reliable for this ...

ortant. Aprotinin has effects on hemostasis. In addition, aprotinin may exert multiple biologically relevant effects in the context of cardiac surgery and CPB. For example, it decreases neutrophil and macrophage activation and chemotaxis, attenuates release and activation of proinflammatory cytokines, and reduces oxidative stress. Despite these perceived benefits, the routine use of aprotinin ...
