Step 1 - Add a Combo Box Object to a Screen and Create the VBScript You either can create the script in the Activate event of the combo box, or you can create a script in the Scripts folder in WinCC Pro. If you are going to be using a lot of dynamically loaded combo boxes, then I would

suggest creating it in the Scripts folder.

The code you show is mostly correct, but actually the problem in that line has something to do with the implementation of the VBScript interface inside the WINCC environment. If you created a new variable called "theSheet" to hold the reference to the Excel worksheet, you would still avoid that syntax checking problem in WinCC.
